## DR. King's Restoration Method

What It Does for Toothless People

By means of this wonderful method we are able to give back to a patient the full set of teeth he or she started in with in the beginning. All we require is two or more teeth in each jaw to work from, and we shall not resort to plates or ordinary bridge-work in the process of the work. Your mouth will be free from incumbrances.

Before we accomplish this result we put the gums and the natural teeth in a healthy condition, tightening the teeth which may be loose and curing pyorrhea if the patient is afflicted with that dreadful disease.

All of the teeth we supply are practical teeth each in its place, so that the strain is equally divided. One is able to bite on these teeth and use them in exactly the same manner as he would his natural teeth. They match nature's teeth so closely as to deceive experts. They are beautiful to look at and a source of constant delight to the one who wears them.

A PAINLESS PROCESS

An Impression has gone forth that there is some surgical operation connected with this method of restoring missing teeth. Some people have written in to know if we bore down into the bone and put the teeth in on pegs!

Others have an idea we set the new teeth into the sockets where the natural teeth were originally.

It is quite natural that some unthinking people would ask such questions, and in order that they may be fully answered we will state that there is no boring, no cutting, no implantation about this method, nothing about the work that is painful while it is being done or afterward.

Patients leave the office with these teeth in place and at once begin chewing meat, eating candy, toast, or anything else with the same comfort they would enjoy if every tooth in their head had grown there.

If we couldn't promise this and make good on the promise, the Restoration Method would not be a success. It would be no better than ordinary bridge-work or partial plates.

WE ARE GENERAL PRACTITIONERS

All Forms of Dentistry Treated by Experts.

While the Restoration Method is our great specialty—we are general dental practitioners as well. From the simplest filling to the most intricate piece of porcelain work, our experts are at the service of the public.

Naturally we would do such work well, much better than it could be done in a one-man office, for the operators employed here are all men of the very highest skill. They need to be to do the Restoration work. Bunglers would not be tolerated in our office for a day, neither would dental students. We demand the finished craftsman, both at the operating chair and in the laboratory.
